STICKY NOTE | TEAM

[Team name] Sticky Note

Everything open for our people and our bots, in one place.

Updated [day and time, in your human's time zone with a label, for example "Tue 9:40 AM CT"]

This note holds open items only: things still to do, decide or fix. When something is finished, it moves to the Done Log and comes off this note.

How to use this template

This is a template. To start your own note:

1. Make a copy (File, Make a copy) and name it Sticky Note.
2. Replace every [bracket] with your own words.
3. Delete the example rows (they're marked Example) and then delete this box.
4. Put the link first in your files home, and pin it where your human can find it fast.

Status key

Open	On the list and being worked on.
Waiting	Waiting on a person: an answer, a choice or a yes.
Blocked	Stuck. Something is missing, like access, a file or a login step.

Put a status on each item. Item numbers never change while an item is on the note, so anyone can say "#4" and mean that one. New items get the next number. When an item is done, its number retires; don't renumber the rest.

Top 3 right now

Humans and bots work these first. The humans pick them, never more than 3.

1. *Example:* [What it is, in one plain line.]

What you need to do: [one plain line].

2. *Example:* [What it is.]
What you need to do: [one plain line].

3. *Example:* [What it is.]
What you need to do: [one plain line].

Got 10 minutes? Start here

These stop the bots. Fix one and we're running again.

Example: The bot can't open the shared folder. It blocks this week's posts. Fix: share the folder with the bot's email. Who: [name]. About 2 minutes.

No more than 3. When nothing is blocked, write: Nothing stuck right now.

Who's on the team

Who	Human or bot	What they do	Time zone
Example: [Name]	Human	[Decides, approves, posts]	[CT]
Example: [Name]	Human	[Reviews drafts]	[ET]
Example: [Bot name]	Bot	[Drafts posts and captions]	
Example: [Bot name]	Bot	[Keeps the calendar and this note]	

Today

What's being worked on today, and who has it.

- **#1** *Example:* [Finish the draft for the Monday post.] Owner: [bot name]. Next: [send it to the team by noon]. **Open**
- **#2** *Example:* [Check last week's numbers.] Owner: [bot name]. Next: [share three lines in the team chat]. **Open**

Waiting on the human

Decisions or answers only a person can give. Name who it's waiting on. About 5 or fewer.

- **#3** *Example:* [Pick one of two headlines.] Waiting on: [name]. Why: [the post is ready otherwise]. Next: [reply with A or B]. **Waiting**
- **#4** *Example:* [Say yes or edit to the new flyer.] Waiting on: [name]. Next: [reply KEEP or EDIT]. **Waiting**

To go over together

Bigger things to talk through at the next check in. Add the date of that check in here: [date].

- **#5** *Example:* [Should we post on a new platform?] Bring: [the short pros and cons list]. **Open**

Blocked or needs access

Anything stuck. Say what's missing, what it blocks, the fix, who does it and about how long it takes.

- **#6** *Example:* [The bot can't open the shared drive.] Blocks: [this week's files]. Fix: [add the bot's email as an editor]. Who: [name]. About 2 minutes. **Blocked**

This week

Open items due this week, grouped by project. Numbers keep going from the lists above.

[Project name]

- **#7** *Example:* [Draft next week's posts.] Owner: [bot name]. Due: [Thursday]. **Open**
- **#8** *Example:* [Update the website hours.] Owner: [name]. Due: [Friday]. **Open**

[Another project]

- **#9** *Example:* [One plain line on what it is.] Owner: [name]. Due: [day]. **Open**

Done Log

Finished items don't stay on this note. Move each one to the Done Log the moment it's done, with the date and one short line, then take it off here.

Open the Done Log: [link to your Done Log]

Where everything lives

What	Link
Files home (one place for everything)	[link]
Done Log	[link]
Example: This week's plan	[link]
Example: Team chat	[link]
Example: Calendar or tracker	[link]

Label links in plain words, like "this week's posts", not file names.

Lessons learned

Rules we discover together, written so a stranger would understand them.

• *Example:* Before a bot says something is saved, it opens the saved copy and checks it's really there.

Keeping this note alive

• Update it every time something is added, finished or changes.

• Keep it to about 15 open items. Group small ones together.

• Write in plain words. Leave out file names, version numbers and team shorthand.

• The first time you use an approval word, explain it: reply KEEP to approve as is, or EDIT with changes.

• If you're told something is missing, add it right away and check what else got missed.
